

# Introduction to IoT

## 1. IoT Intro Presentation

## 2. Setup Development Environment

- [Install Arduino IDE](#), for more information see the [Official documentation](#)
  - [Installing ESP8266 NodeMCU Board in Arduino IDE 2.0](#)
- [How to install CH340 driver - Driver Download Section](#)

## 3. Hardware Review

- Dev Board: Wemos D1 Mini
- Microcontroller: ESP8266 12-E Chip [ESP8266 hardware review](#)

## 4. Soldering

Here it gets practical! You need to solder the microcontroller and some of the sensors, which you will need in the next session.

Fig. 1: In Action at UNICAES

## 5. Coding Warm-up

Now let's check if your Microcontroller works. Also, you will learn how to upload your first sketch. Basic Blink example:

## Blink.ino

```
void setup() {  
  // initialize digital pin LED_BUILTIN as an output.  
  pinMode(LED_BUILTIN, OUTPUT);  
}  
  
// the loop function runs over and over again forever  
void loop() {  
  digitalWrite(LED_BUILTIN, HIGH); // turn the LED on (HIGH is the  
  voltage level)  
  delay(1000); // wait for a second  
  digitalWrite(LED_BUILTIN, LOW); // turn the LED off by making the  
  voltage LOW  
  delay(1000); // wait for a second  
}
```

## Additional information
