

Post Data to Datastream

1. Create a Sensor in farmOS
2. Create a DataStream in / for that sensor
3. Call GET http://localhost/api/data_stream/basic/ to get all basic data streams
4. Response:
 1. data includes an array of data_streams
 2. ID: res.data[i].id
 3. private_key: res.data[i].attributes.private_key
 4. name: res.data[i].attributes.name
5. Call POST http://localhost/api/data_stream/<ID>/data?private_key=<private_key> with a Body (in Postman 'raw','json'):
 1. {'data': 20}
 2. basic data streams can only have one value
 3. will look for 'data' in JSON
6. Should give a 201 Created back
7. This value can now be found in Assets>Sensors>(The Sensor you want)>Data stream
