 GoodFirms

ERPNext, Granular, FarmBrite are irrelevant to us because they are only cloud-hosted. We are unable to modify it.

farmOS

Tania

- [Tania](#)
- [Repo](#)
- No active development (last commit 17 Oct 2020 (or just not public))
- Tech Stack:

- Go
- MySQL
- NodeJS

AgroSense

- [AgroSense](#) (TLS-Cert expired)
- Less crop managment
- More health / soil management
- Repo somewhere on BitBucket but I could not access it (maybe new account needed)
- Bad website near to no information

LiteFarm

- [LiteFarm](#)
- [Repo](#)
- Tech-Stack:
 - Postgres
 - React
 - Node
 - Express
 - Docker
- No real documentation (some (very few) inline comments)
- Mobile Optimized
- Tasks + Notfications
- simple + “map-based” interface
- operations, inventory, and payroll
- audits and verifications easy by inviting verification
 - I´m currently not sure if everyone can be invited or just some specific ones
 - The website just mentioned the organic certification
 - Is this an international standard? I don't know.
- The website has not that much information on it
- [Roadmap available](#)
- Seems modern and simple
- Will need some time to get it modified because of the missing documentation
