

ULSA Python Workshop - 2022-09-09

Workshop by Clein Sarmiento and Rolf Becker from HSRW on 2022-09-09 =====
Preparation ===== * Install the Anaconda Python Data Science Suite * Download

ulsa_ws_v003.zip

containing the workshop Python code * Download

nicaragua_geothermal_scraper_v001.zip

===== Impressions ===== |

| | Student workshop at ULSA with Clein and Rolf, 2022-09-09 | ===== Code Snippets to Handle the Conda Environment ===== This code is to be executed in a terminal. I extended the list of software packages to be installed to run all provided workshop examples. Mac and Linux users just open a standard terminal. On Windows open the Anaconda Powershell prompt.

Execute the following code: `<code bash> # create conda environment including installation of all necessary packages conda create -c conda-forge -n ulsa python=3 jupyterlab ipywidgets numpy pandas scipy scikit-learn matplotlib plotly seaborn # activate conda environment conda activate ulsa # other packages: web scraper conda install -c conda-forge beautifulsoup4 # other packages: web dashboards with dash/plotly conda install -c conda-forge jupyter-dash dash dash-core-components dash-html-components # start Jupyter-Lab (<Ctrl>-C in the terminal to exit jupyter-lab) jupyter-lab # leave conda environment and change to the base (default) environment conda deactivate # remove`

environment (in case you want to delete it) # `conda env remove -n ulsa` </code> ===== Further
