Image Classification Game: Part 1

This **Snap! game** uses **Nvidia Jetson** capability to classify images.

Offline Snap! downloading

Please download and open Offline version of Snap! for our project. Go to https://snap.berkeley.edu/offline and follow the steps.

Snap! files' downloading

Please open the link Classification Game to download our project on your computer. Probably you would see the xml in raw format. Click the right button of your mouse and save it on the disk.

Web camera Image in Snap!

You can get picture from your web camera in Snap!.

• video capture block to enable video capturing.

• Change value of **set video transparency** block to 0 for clear image.

```
set video transparency to 0
```

• **video snap on stage** block reports picture from stage.

Connection to Jetson from Snap!

If you have not imported it yet, please download jetson blocks and import it to your Snap! project.

Use connect to Jetson url block to connect Jetson.

connect to jetson url ws://ip_address:4040

You need **ip address** of Nvidia Jetson. You can use *ifconfig* command in a terminal to get **ip address**.

• Store the value of **jetson_name** in a variable.

• Store the value of **connect to Jetson url** block in a variable for later use.

Response from classification

Here we will send **video snap on stage** to Jetson for processing. Jetson will respond back class name, confidence value and class ID.

Only **class name** and **confidence value** will be used in this example. This project does not use **class ID**.

- Use **get response from Jetson** block to send **image**, and get **class name** and **confidence** value.
 - First input slot is for **jetson** variable that stores websocket data.
 - Second input slot is for costume you want to be classified by Nvidia Jetson.

Class name and confidence value

This section will demonstrate how to handle **response** variable to access **class name** and **confidence value.**

class name is the 2nd item of 1st item of response block.

https://wiki.eolab.de/ Printed on 2024/05/20 07:20

You can create custom blocks, to get **class name** *get class* name from response and to get **confidence** *get confidence* from response .

Speech functionality

Speech functionality is available as a library in Snap!. Select *export libraries* from settings then choose *speech module* .

• Use join block to create text like I am confidence percent sure, it is class name .

• Use **speak and wait** block to read text a loud.

```
| lam | round | 100 x | item | 2 of | item | 2 of | response | 100 | item | 2 of | item | 3 of | ite
```

Repeat block for game

Last step is adding loop for the game.

Use repeat block and put script inside of it.

```
repeat until key space pressed?

| set response to send picture to jetson jetson video snap on Stage |
| set response to send picture to jetson video snap on Stage |
| set response to send picture to jetson video snap on Stage |
| set response to send picture to jetson video snap on Stage |
| set response to send picture to jetson video snap on Stage |
| set response to send picture to jetson video snap on Stage |
| set response to send picture to jetson video snap on Stage |
| set response to send picture to jetson video snap on Stage |
| set response to send picture to jetson video snap on Stage |
| set response to send picture to jetson video snap on Stage |
| set response to send picture to jetson video snap on Stage |
| set response to send picture to jetson video snap on Stage |
| set response to send picture to jetson video snap on Stage |
| set response to send picture to jetson video snap on Stage |
| set response to send picture to jetson video snap on Stage |
| set response to send picture to jetson video snap on Stage |
| set response to send picture to jetson video snap on Stage |
| set response to send picture to jetson video snap on Stage |
| set response to send picture to jetson video snap on Stage |
| set response to send picture to jetson video snap on Stage |
| set response to send picture to jetson video snap on Stage |
| set response to send picture to jetson video snap on Stage |
| set response to send picture to jetson video snap on Stage |
| set response to send picture to jetson video snap on Stage |
| set response to send picture to jetson video snap on Stage |
| set response to send picture to jetson video snap on Stage |
| set response to send picture to jetson video snap on Stage |
| set response to send picture to jetson video snap on Stage |
| set response to send picture to jetson video snap on Stage |
| set response to send picture to jetson video snap on Stage |
| set response to send picture to jetson video snap on Stage |
| set response to send picture to send picture to jet
```

Image Classification Game: Part 2

Please open the link Classification Game: Extended to download the extended version of our project on your computer.

Start Camera

Drag and drop the **start video** custom block to start using web camera.

Connection to Jetson

Repeat the steps from Part 1 to connect to the Jetson Computer.

```
set jetson_name v to dev-kit-20
set jetson v to connect to jetson url join ws// (jetson_name) (4040 (*)
```

Game Initialization

Use **When flag clicked** , variable setting and our custom blocks for initializing the game

https://wiki.eolab.de/ Printed on 2024/05/20 07:20

```
when clicked
init variables
set current_page to start page
render current_page
hide sprites
```

Game process control blocks

In the game process we use **when** block to catch the click event from the stage and change the current page and broadcasting to tell the other blocks that game is starting.

```
when start label is clicked

set current page to game page

render current page

broadcast start game to all wait until not mouse down?
```

Also we added additional blocks to resume the game after it was stopped.

```
when space wey pressed

set current_page to game page

render current_page

broadcast start_game with
```

Main part: sending images to Jetson and having fun with our pets! :-)
